

2. QB - data type, constructor, methods

"Success is the result of perfection, hard work, learning from failure, loyalty, and persistence." — Colin Powell 🧐

1. Write a program to find simple interest using void method. Print those in method.
2. WAP to get simple interest using parameterized methods. print statement should be in main class.
 - a. Add a new method to find Rate of Interest
 - b. Principal amount
 - c. Period
3. WAP with parameterized method to calculate Area of following shapes
 - a. Square
 - b. Rectangle
 - c. Circle
 - d. Rhombus
4. WAP to find curved surface area of following, using void method
 - a. Sphere
 - b. Cylinder
 - c. Cube
 - d. cuboid
5. WAP to find the square, cube of a single number. Input should be given through constructor.
6. WAP with return type method which will have different methods with all 8 primitive return type
7. Using two classes and parameterized method print current date and time. ★
8. WAP such that input to a method will be integer and it will print its value in word, using return type method. ★ ★
#hint : input - 2 then output - Two
9. WAP with parameterized method to compute the sum of digits in an integer.
#hint : input - 25 then output - 7 (2+5), using operators it can be solved.
10. WAP such that a parameterized method will return random integer between 1 to 100 without giving any input.(once a method is called it should return any random int between 1 to 100). ★
11. Find the factorial of a number using a parameterized method. ★
12. WAP to find the percentage of 5 integers.
13. WAP to get current age of person providing only Date of birth as an input in parameterized method. Void method can be used here. ★
