

5.1 QB - String class methods

- What does the `length()` method return when called on an empty string (`""`)?
- Given `String str = "Hello World";`, what is the result of `str.charAt(4)` ?
- How does `equals()` differ from `==` when comparing two strings?
- What will `str.equalsIgnoreCase("hello world")` return if `str = "Hello World"` ?
- What is the output of `"java".toUpperCase()` ?
- What will `" Java ".trim()` return?
- Given `String str = "HelloWorld";`, what does `str.substring(5)` return?
- Given `String str = "Programming";`, what does `str.substring(3, 6)` return?
- What is the output of `"apple".compareTo("banana")` ? Explain why.
- How would you check if a string starts with the prefix `"pre"` ?
- What does `"OpenAI".indexOf('A')` return?
- Given `String str = "abracadabra";`, what will `str.lastIndexOf("a")` return?
- What will `"Hello".concat("World")` return?
- What is the result of `"abc".replace('b', 'x')` ?
- How would you check if a string contains the substring `"test"` ?
- What does `"".isEmpty()` return? What about `" ".isEmpty()` ?
- What will be the result of `"Test".toLowerCase()` ?
- How can you split the string `"a,b,c"` into individual elements?
- What is the result of `"Hello".equals(new String("Hello"))` ? Why?
- What does `"java".repeat(3)` return? (Java 11+ only)
