

5.2 QB - String using for loop

1. **Count vowels in a string.**
2. **Count consonants in a string.**
3. **Count digits in a string.**
4. **Count spaces in a string.**
5. **Count uppercase and lowercase letters.**
6. **Reverse a string using a loop.**
7. **Remove spaces from a string.**
8. **Replace all vowels with '*'.**
9. **Convert lowercase to uppercase (and vice versa).**
10. **Check if a string is a palindrome (manually).**
11. **Count frequency of a specific character.**
12. **Replace all digits with '#'.**
13. **Extract digits from a string.**
14. **Check if all characters are alphabetic.**
15. **Calculate ASCII sum of all characters.**
16. **Find the most frequent character.**
17. **Find the first non-repeating character.**
18. **Remove duplicate characters (preserve order).**
19. **Check if two strings are anagrams (using frequency count).**
20. **Toggle the case of each character.**
21. **Replace spaces with hyphens.**
22. **Capitalize the first letter of each word.**
23. **Shift characters by one (e.g., 'a' → 'b').**
24. **Compress string as counts (e.g., "aaabb" → "a3b2").**
25. **Find second most frequent character.**
26. **Count total words in a sentence.**
27. **Reverse each word individually in a sentence.**
28. **Remove special characters (keep alphanumeric only).**

29. **Check if string contains all unique characters.**

30. **Print frequency of each character.**
